Education

Delhi Technological University <i>B.Tech in Computer Engineering (CGPA: 8.02/10)</i>	2022 – 2026 New Delhi, India
S M Arya Public School <i>CBSE (Class XII) (Percentage: 96.2%)</i>	2022 New Delhi, India
St. Therese's School <i>ICSE (Class X) (Percentage: 92.6%)</i>	2020 Kushinagar, India

Experience

Software Development Engineering Intern <i>Expedia Group</i>	June 2025 – July 2025 Gurugram, India
- Developed and deployed robust RESTful APIs using Java and Spring Boot to query large datasets directly from AWS S3, projected to improve data retrieval efficiency by 40%. - Collaborated with Data Engineering teams to design optimized S3 data schemas, ensuring scalability for 10M+ records, and partnered with Frontend engineers for seamless user interface integration. - Followed agile practices, contributed to code reviews that reduced post-deployment bugs by 30%, ensuring consistent software quality.	
Agentic Ticket Resolution System <i>Python, FastAPI, DeepSeek, LangGraph, LangChain</i>	
- Architected a modular agent runtime separating orchestration, domain skills, tool semantics, and safety policies, with progressive context loading across 23 enterprise tools. - Built request-isolated execution using LangGraph memory, virtual filesystems, middleware-managed scratchpads, scoped caches, failure logs, and lifecycle cleanup. - Designed a two-stage inference pipeline: unconstrained tool-driven reasoning followed by function-calling schema repair, deterministic validation, and failure recovery.	

Projects

ChefHub <i>React, Node.js, MongoDB, Gemini, Langfuse</i>	GitHub
- Engineered a Gemini-powered booking agent orchestrating a 6-stage workflow from intent extraction through chef search, availability, pricing, menu generation, and draft creation, returning up to 3 ranked chefs. - Implemented 180-day preference memory capped at 30 notes and a 4-step human approval gate covering chef, booking details, menu, and price before draft creation. - Productionized 10 AI endpoints with a 4-model Gemini fallback chain, prompt-injection detection, PII redaction, schema validation, and Langfuse/OpenTelemetry tracing.	
JustUs <i>React, Node.js, Socket.io, Gemini</i>	GitHub
- Built 25 Socket.io handlers for one-to-one/group chat, 7 message types, sync, reactions, and WebRTC; added Curve25519/XSalsa20-Poly1305 E2EE and 30-msg/min limits. - Added Gemini group AI for summaries (200 messages) and Q&A/actions (100-message context), plus 4-tier translation with a 1,000-entry cache.	

Technical Skills

Languages: C++, Python

Frameworks & Libraries: React.js, Express.js, Node.js, Spring Boot, NumPy

Developer & AI Tools: Git, VS Code, IntelliJ, Codex, LangChain, Prompt Engineering, Claude, GitHub Copilot

Coursework: Data Structures, OOP, DBMS, OS, Deep Learning, ML, Computer Networks

Achievements

- Knight** on LeetCode with rating of 1892
- Secured a **1200+ rating** on Codeforces.
